## Status of Compliance Documents

Compliance Documents are prepared by the Department of Building and Housing in accordance with section 22 of the Building Act 2004. A Compliance Document is for use in establishing compliance with the New Zealand Building Code.

A person who complies with a Compliance Document will be treated as having complied with the provisions of the Building Code to which the Compliance Document relates. However, a Compliance Document is only one method of complying with the Building Code. There may be alternative ways to comply.

Users should make themselves familiar with the preface to the New Zealand Building Code Handbook, which describes the status of Compliance Documents and explains alternative methods of achieving compliance.

Defined words (italicised in the text) and classified uses are explained in Clauses A1 and A2 of the Building Code and in the Definitions at the start of this Compliance Document.

### Document Status

The most recent version of this document, as detailed in the Document History, is approved by the Chief Executive of the Department of Building and Housing. It is effective from 10 October 2011 and supersedes all previous versions of this document.

People using this Compliance Document should check for amendments on a regular basis. The Department of Building and Housing may amend any part of any Compliance Document at any time. Up-to-date versions of Compliance Documents are available from [www.dbh.govt.nz](http://www.dbh.govt.nz)

# References

For the purposes of New Zealand Building Code (NZBC) compliance, the Standards and documents referenced in this Compliance Document (primary reference documents) must be the editions, along with their specific amendments, listed below. Where these primary reference documents refer to other Standards or documents (secondary reference documents), which in turn may also refer to other Standards or documents, and so on (lower-order reference documents), then the version in effect at the date of publication of this Compliance Document must be used.

# Acceptable Solution G10/AS1

It is intended that the New Zealand Building Code will in due course provide acceptable solutions for piping a range of fluids and solids. This acceptable solution is restricted to the reticulation of gas (typically natural or *town gas*), used as an energy source.

For water supply piping, an acceptable solution is given in G12/AS1.

## Piping for Gas used as an Energy Source

### 1.0 Pipework Construction

#### 1.0.1 Pipework installed in *buildings* shall:

- a) Be designed in accordance with AS/NZS 1170, and comply with the seismic design and installation requirements of NZS 4219,
- b) Use materials and jointing techniques complying with Table 1,
- c) Have no plain nipples, square back elbows or long screws, and
- d) Have metal (including spirally wound metal) gaskets with a minimum melting point of 500°C.

#### COMMENT:

Pipework can be identified using the marking conventions given by NZS 5807.

### 1.1 Drainage and cleaning provisions

**1.1.1** Where condensates can form in a pipeline, they shall be removed by grading the pipe with a fall of 4 mm per metre towards a *tailpipe* (drip), located at the piping low point nearest the outlet side of the meter.

**1.1.2** If this is impractical, a single *tailpipe* may be provided at the lowest point in the pipeline, which shall have a fall to that point.

#### 1.1.3 Tailpipes

*Tailpipes* shall be:

- a) Constructed to provide:
  - i) ready access for cleaning and draining,
  - ii) a trap which on filling will shut off the flow of gas before the condensate can run back to the meter, and
  - iii) protection from frost,

b) Of sufficient capacity for:

- i) the pipes draining into them, and
- ii) the amount of condensate likely to occur, and

c) Installed with a suitable control fitting and plug to allow removal of condensate if the *tailpipe* is below ground.

### 1.2 Pipework installation

**1.2.1** A pipework installation shall have:

- a) Pipes supported in accordance with Table 2,
- b) Pipes separated (by at least 25 mm) from any metallic electrical conduit, or metal armoured or metal sheathed electrical wire,
- c) Pipe risers which are:
  - i) supported by anchors and attachments which are capable of supporting the total weight of the riser and allow for differential expansion,
  - ii) sleeved through floors,
  - iii) not jointed at sleeve locations, and
- d) Pipe bends and offsets which:
  - i) are constructed without buckling, cracks, or physical damage, and
  - ii) give at least the gas-carrying capacity of a standard fitting, and
- e) No piping laid on the ground.

Material	Acceptable piping	Acceptable fittings	Acceptable jointing	Special conditions
<b>Steel</b>	Steel pipe to NZS/BS 1387, NZS/BS 3601, ASTM A53, ASTM A106 or API 5L.	Screwed pipe fittings, malleable cast iron to BS 143 and 1256 or ANSI B16.3.	Screwing/socketing to NZS/BS 21.	1. Black pipe: <ul style="list-style-type: none"> <li>i) is not permitted below ground unless protected. (Galvanising is not sufficient protection.)</li> <li>ii) is not permitted with wet gas.</li> <li>iii) shall be painted or suitably coated when installed above ground.</li> </ul> 2. All joints in locations below ground shall be externally protected against corrosion. 3. Welding shall be by welders certified in accordance with API 1104. 4. Flanged joints may only be used when other jointing methods are impracticable.
		Wrought steel to BS EN 10241, or ANSI B16.11.	Welding to BS 2971 or API 1104.	
		Socket-welding pipe fittings, sockets to NZS/BS 3799 or ANSI B16.11.		
		Butt-welding fittings to BS EN 10253-2, BS EN 10253-3 or ANSI B16.9.		
		Flanges to BS 10, AS/NZS 4331		
		ANSI B16.1 and B16.5.		
<b>Copper</b>	Copper tube to NZS 3501, NZS 3502 or AS 1432.	Copper tube expanded with proper forming tools to provide capillary tolerances.	Brazing in accordance with BS EN 14324 using copper-phosphorous brazing alloy to AS 1167-1 or BS EN 1044, with a nominal silver content of not less than 5% and a melting point in excess of 550°C.	1. Not for installation below ground, unless in protective ducting.
		Copper and copper alloy capillary fittings to AS 3688.		
		Copper alloy compression fittings to AS 3688 or AS D26.	Flares formed with proprietary flaring tools.	
<b>Plastic</b>	Polyethylene to NZS 7646.	Fittings to NZS 7646.		Below ground use only.
